## **DETAILED ACTION**

### ***Election/Restrictions***

Applicant's election without traverse of figs. 4, 5 claims 1-10, 12-17 in the reply filed on 10/16/06 is acknowledged.

### ***Claim Objections***

Claims 14-16 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim should refer to other claims in the alternative only. See MPEP § 608.01(n). Accordingly, the claims 14-16 have not been further treated on the merits.

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 3-5 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The expression "the means for housing" (claim 3) has no definite antecedent basis in the claims.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-5, 17 are rejected under 35 U.S.C. 102(b) as being anticipated by Wells. The patent to Wells teaches structure as claimed including a series of panels (fig. 4) , body member for housing the panels(15), cover member (23), retaining means (the surface of the walls of the container).

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 6-10, 12-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wells in view of Reynolds. The patent to Wells teaches structure substantially as claimed as discussed above including body member having an inner cavity, means for retaining, the only difference being that the means for retaining does not include aligned grooves. However, the patent to Reynolds teaches the use of providing grooves to (E) to hold contained structures in place to be old. It would have been obvious and well within the level of ordinary skill in the art at the time of the invention was made to modify

the structure of Wells to include a retaining structure to preclude movement in a container in the form of grooves, as taught by Reynolds since such structures are conventional structures used in the same intended purpose of precluding movement of contained structures, thereby providing structure as claimed.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The patents to Davis, Nyman, Munoz, Smith, Vanice, O'Neill et al, Toler, Thomas et al, Whitmore teach structure similar to applicant's.
